# VET ALLERGY DIAGNOSTIC SOLUTION

**Have full control of dog, cat and horse allergy diagnostic tests in your own laboratory.**

The Canine INgezim PLEX Environmental and Food Sensitization kits allow to detect sensitizations to the most common environmental and food allergens affecting dogs. Together with the GSD allergy ELISA tests, they form the most complete solution for diagnosing veterinary allergies.

**ALL IN ONE:** Complete solution (kits + automation) to carry out the diagnosis in your own laboratory, without having to send samples or depend on third-party companies.

**ACCURACY:** In microarrays assays, sensitivity is increased due to the miniaturization of the assay. Similarly, double testing of each allergen and the use of CCD\* blockers provide greater diagnostic precision.

**EXPERIENCE:** We combine the best expertise of two GSD companies performing research on allergy diagnostics for more than 10 years, to offer you complete diagnostics solutions including consumables, automation and technical support

**COST & TIME REDUCTION:** Multiplexing reduces labor and effective work time, which further reduces the already affordable price per test. In addition, it requires a low sample consumption (100 µL of serum), facilitating handling with samples from companion animals.

\*CCD = Cross-reactive Carbohydrate Determinants, present in glycoproteins of some Plant and insect allergens. While CCDs are found in many allergens, they do not trigger clinical symptoms.
